DETAILED ACTION

Page 2

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/7/05 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Pope et al. (WO 98/02942).

Pope (Figures 1-95) shows a header assembly having an insulative housing 16 with a plurality of walls defining an interior cavity, a plurality of contacts 12 within the cavity and extending through one of the walls to an exterior of the housing for surface mounting on a circuit board, a pair of alignment ribs (elongated elevated portion) extending on an exterior surface, solder tails (mounting portions) 21, 23 of the contacts abut the alignment rib and positioned between the alignment rib and a mounting surface of a circuit board. The housing has longitudinal side walls and lateral side walls. The

Art Unit: 2839

ribs extend parallel to one of the longitudinal and lateral side walls. The contacts extend in a plurality of rows from a bottom wall of the housing and are preloaded against the ribs. Some of the contacts have a first length and some of the contacts have a second length wherein the first length is greater than the second length. The contacts are staggered. Pope further teaches the use of solder clips and reflow soldering for surface mounting the contacts. The contacts have rounded ends and the ribs have crowned surfaces. The solder tails of the contacts are flexed about the alignment ribs. The method of assembling the contacts in the housing is inherent.

4. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Pope et al. (6,135,781).

Pope (Figures 1-95) shows a header assembly having an insulative housing 16 with a plurality of walls defining an interior cavity, a plurality of contacts 12 within the cavity and extending through one of the walls to an exterior of the housing for surface mounting on a circuit board, a pair of alignment ribs (elongated elevated portion) extending on an exterior surface, solder tails (mounting portions) 21, 23 of the contacts abut the alignment rib and positioned between the alignment rib and a mounting surface of a circuit board. The housing has longitudinal side walls and lateral side walls. The ribs extend parallel to one of the longitudinal and lateral side walls. The contacts extend in a plurality of rows from a bottom wall of the housing and are preloaded against the ribs. Some of the contacts have a first length and some of the contacts have a second length wherein the first length is greater than the second length. The contacts are staggered. Pope further teaches the use of solder clips and reflow soldering for surface

mounting the contacts. The contacts have rounded ends and the ribs have crowned surfaces. The solder tails of the contacts are flexed about the alignment ribs. The method of assembling the contacts in the housing is inherent.

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dong (6338630).
- 6. Pope (6,135,781) is prior art of record but not relied upon in previous office actions.
- 7. This is a RCE of applicant's earlier Application No. 10/718,371. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 2839

Response to Arguments

8. Applicant's arguments with respect to claims 1-21 have been considered but are moot in view of the new ground(s) of rejection.

Contact Information
